Summary

Backend-focused Software Engineer experienced in building scalable and production-grade applications, secure APIs, AI-powered integrations, and cloud-native systems. Skilled in backend architecture, system optimization, authentication, DevOps workflows, and modern full-stack application development.

Education

J.C. Bose University of Science & Technology, YMCA, Faridabad

Bachelor of Technology in Computer Engineering, **CGPA: 7.4**

2021 – 2025

Technologies

Languages: C++, Java, JavaScript, Python, Dart, SQL, TypeScript, Go

Frontend: React.js, Next.js, Flutter, HTML, CSS, Tailwind CSS

Backend: Spring Boot, Spring MVC, Spring AI, Node.js, FastAPI, Hibernate, JPA, REST APIs, Microservices, JWT, OAuth2, AOP

AI & Intelligent Systems: LLM-powered Applications, RAG Architecture, Gen AI, Hugging Face, NLP, AI System Integration

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Aerospike

Cloud & DevOps: Docker, Kubernetes (K8s), AWS S3, CI/CD, GitHub Actions, Jenkins

Messaging: Kafka, RabbitMQ

Testing & Monitoring: JUnit, Mockito, Swagger, Prometheus, ELK Stack, New Relic

Development Practices: System Design, Design Patterns, Domain-Driven Design (DDD), Scalable Architecture, Agile, Git, SOLID Principles, Production-grade Backend Engineering

Experience

Indoqubix Cloudtech Private Limited, India

Associate Software Engineer

Mar 2025 – Apr 2026

- Developed scalable backend systems for a healthcare platform serving hospitals, patients, doctors, and wellness coaches, implementing secure subscription-based workflows, ABHA verification, and optimized REST APIs using **Spring Boot**, **JPA/Hibernate**, and **PostgreSQL**.
- Integrated AI-powered patient assistant workflows using **LLMs** for intelligent healthcare support and contextual query handling.
- Built production-grade backend systems with optimized APIs, secure authentication, scalable deployments, and cloud-native infrastructure using **Redis**, **Docker**, **Kubernetes**, and **CI/CD**.
- Enhanced system observability and reliability using **Prometheus**, **ELK Stack**, and **New Relic** for monitoring, logging, and performance tracking.

Projects

JuroStay – Full Stack Rental Booking Platform

- Architected and developed **JuroStay**, a scalable full-stack rental booking platform using **Spring Boot**, **React.js**, and **PostgreSQL**, implementing secure **JWT/OAuth2**-based role-driven authorization, production-grade backend engineering practices, and optimized RESTful APIs for high-performance user and admin workflows.
- Engineered a dynamic booking and pricing engine using advanced **Design Patterns** including **Decorator**, Strategy, and Factory patterns to support surge pricing, seasonal offers, coupon orchestration, and transactional workflows, while optimizing complex SQL queries through indexing, pagination, caching with **Redis**, connection pooling, and query tuning.
- Integrated **Stripe Payment Gateway** and **AWS S3** for secure payments and scalable media management, while deploying containerized applications using **Docker**, automated **CI/CD** pipelines, and observability tools including **Prometheus**, **ELK Stack**, **Spring Boot Actuator**, and **New Relic** for monitoring, logging, and system health analysis.

Certifications

2023: **Data Structures & Algorithms** – Coding Ninjas
